***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

1. Claims 1, 4-13, 15-20, and 22-24 are rejected under 35 U.S.C. 103(a) as being unpatentable over Marsh (5471405) in view of Mott (5500635).

Marsh shows a shoe with a sole and shock absorbing capabilities comprising a sensor (14L), operational circuitry (32L), and a display apparatus (20) substantially as claimed except for the exact type of sensor. Mott teaches using a piezoelectric sensor as a sensor and a power source and also teaches providing a resistor network. It would have been obvious to use a sensor which acts as a sensor and provides power and to provide a resistor network as taught by Mott in the shoe of Marsh to reduce the number of components/size, reduce cost, reduce weight of the shoe, and to make the circuit more durable.

In reference to claims 22-24, these method claims appear to be obvious/inherent methods of using the invention of Marsh as modified above.

***Allowable Subject Matter***

2. Claims 14 and 21 are allowed.

***Response to Arguments***

3. Applicant's arguments filed 3/15/04 have been fully considered but they are not persuasive.

In response to applicants' arguments that Marsh not being capable of calculating and displaying the "estimated remaining life of the shoe", Marsh states on column 2 line 65- column 3 line 2 "It is also anticipated that...the actual compression of the shoe materials, as well as other wear factions, may be calculated thereby providing an indication of when the shock absorbing properties of the shoe may be worn out".

In response to applicants' arguments directed towards there being no motivation to look towards Mott for a type of sensor to be used, Mott clearly provides such motivation in column 19 lines 29-42 which state "The circuitry involved has been reduced in size....low power consumption...".

### ***Conclusion***

2. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.
